

## Practice Management by and for Wyoming Physicians!

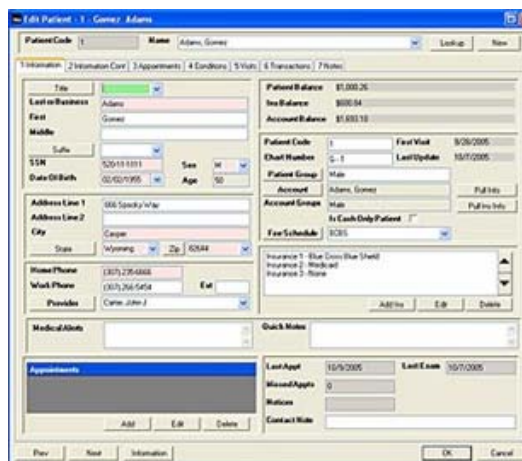

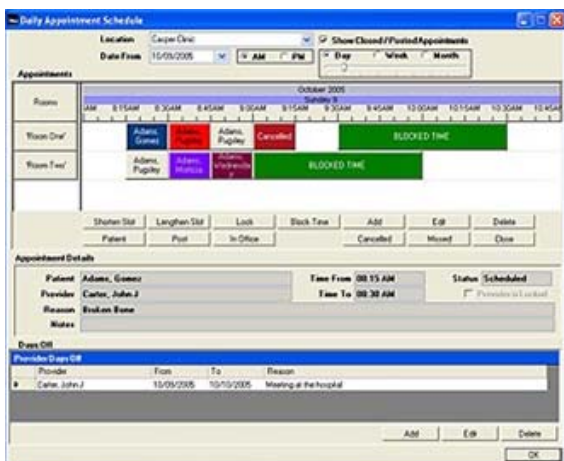

Mederyx was created with Wyoming physicians to fill the existing void in the healthcare industry left by “canned” applications that, by design, are limited to what a vendor believes is needed by all providers. Change is the only constant. Why continually reinvest in information systems every few years just to have them turn obsolete? Mederyx fills the “flexibility” void in the healthcare industry practice management software arena. Open by design, the Mederyx framework provides a stable foundation while offering enormous flexibility for individual practices, processes, and physicians.

### Appointment Scheduling Supports:

- Click and drag time slots
- Quick glance views of provider availability
